

JEREMIAH BUTLER

Easton, MA 02356
(774) 329-5096 - hello@jbutler.dev

SUMMARY

Software engineer with 10+ years shipping production systems across high-scale commerce, enterprise cloud, and defense. Owned platform APIs used by every subscription app on Shopify's \$300B+ GMV platform. Builds autonomous AI systems: agent orchestration, durable agent infrastructure integrations, and AI-assisted engineering practices adopted across teams. Track record of cross-team technical leadership: RFCs, design ownership, mentorship, and operational turnarounds.

WORK EXPERIENCE

Shopify

Senior Software Developer

Remote

January 2024 - September 2026

- Built autonomous agent systems: integrated coding agents with Shopify's durable agent infrastructure (Aquifer/River), built a voice-controlled conductor agent orchestrating multiple agent sessions, and automated support-request triage
- Drove AI-assisted engineering: built a Rust terminal multiplexer for managing concurrent agent sessions; authored code-review agent skills (correctness, completeness, OO design) adopted by teammates; presented autonomous agent-loop techniques to hundreds of engineers on Shopify's internal broadcast platform
- Owned the platform Subscriptions and Pre-orders APIs that all Shopify subscription apps build on
- Built and maintained the open-source Subscriptions reference app: Shopify's first-party subscriptions product and the foundation enterprise merchants fork for bespoke subscription experiences
- Restructured team on-call and resiliency practices; burned down a backlog of ~20 resiliency issues to zero in 4 months while intake continued
- 2x project champion for cross-team initiatives spanning B2B, checkout, legal, and UX; authored 2 RFCs and owned 2 design docs for core data-model changes; mentored a junior engineer to a senior promotion and 2 interns

IBM

Senior Software Engineer

Cambridge, Massachusetts

April 2022 - January 2024

- Developed a hybrid-cloud (AWS, Azure, GCP) monitoring solution for the IBM SevOne Network Performance Management platform
- Published a generalized ETL collection framework, adopted into SevOne for data collection
- Led twice-weekly code kata exercises to foster team growth and collaboration
- Team served as the model for the company-wide migration to agile and DevOps

General Dynamics Mission Systems

Advanced Software Engineer / Software Lead

Taunton, Massachusetts

July 2015 - March 2022

- Led multiple teams through successful test events and contract awards totaling over \$30 million
- Architected large-scale cloud-based mission systems for DoD customers
- Proposed and led internal research bringing machine learning to the tactical edge; adopted by at least 2 further projects
- Created an innersource community with 100+ reusable projects; presented the concept to 130+ participants
- Engineering Leadership Program graduate

EDUCATION

Georgia Institute of Technology

2018 - 2021

MS in Computer Science

Machine Learning Specialization

University of Massachusetts Dartmouth

2010 - 2014

BS in Computer Science

SKILLS

AI Systems: Autonomous Agents, Agent Orchestration, LLM Integration, RAG,
AI Coding Agents, Machine Learning

Programming Languages: Golang, Rust, Ruby, TypeScript, Python, C++, Java

Platform & Infrastructure: Kubernetes, Docker, Terraform, Ansible, MySQL,
PostgreSQL, Redis, gRPC, REST, Microservices, CI/CD, Virtualization

Leadership: Cross-team Initiatives, RFCs & Design Ownership, Mentorship,
Agile, DevOps, TDD
