

JEREMIAH BUTLER

Greater Boston, MA - hello@jbutler.dev

jbutler.dev - github.com/jbutlerdev - linkedin.com/in/jbutler992

SUMMARY

Software engineer with 10+ years experience across high-scale commerce, enterprise cloud, and defense. Takes on the problems nobody owns and nobody has scoped yet, and drives them to done.

WORK EXPERIENCE

Shopify

Senior Software Developer

Remote

January 2024 - September 2026

- Owned the platform Subscriptions and Pre-orders APIs that all Shopify subscription apps build on
- Built and maintained the open-source Subscriptions reference app: Shopify's first-party subscriptions product and the foundation enterprise merchants fork for bespoke subscription experiences
- Built autonomous agent systems: integrated coding agents with Shopify's durable agent infrastructure so agent sessions ran unattended and survived restarts for day-to-day IC work; orchestrated multiple concurrent sessions through a voice-controlled conductor agent
- Drove AI-assisted engineering: authored code-review agent skills (correctness, completeness, OO design). These caught an average of 8 issues per Pull Request which led to team-wide adoption; presented autonomous agent-loop techniques to hundreds of engineers on Shopify's internal broadcast platform
- Refactored a core subscriptions data model fixing a one-to-one relationship that needed to become one-to-many. Handled migration of production data
- Restructured team on-call and resiliency practices; built an agent that routed, categorized, and drafted root-cause analysis for incoming support requests, adopted by the team to absorb intake while burning down a backlog of ~20 resiliency issues to zero in 4 months; organized BFCM Game Day exercises (fault injection, monitoring hardening, mock support requests) ahead of peak load
- Led 2 cross-team projects spanning B2B, checkout, legal, and UX
- Mentored a junior engineer through to a senior promotion, plus 2 interns

IBM

Senior Software Engineer

Cambridge, Massachusetts

April 2022 - January 2024

- Published a generalized ETL collection framework, adopted into the SevOne product to replace one-off legacy Go and Python collectors; used it to build gNMI device collection
- Developed a hybrid-cloud (AWS, Azure, GCP) monitoring solution for the IBM SevOne Network Performance Management platform
- Ran twice-weekly code katas; team served as the model for the SevOne org's agile and DevOps migration

General Dynamics Mission Systems

Advanced Software Engineer / Software Lead

Taunton, Massachusetts

July 2015 - March 2022

- Software technical lead on a microservice architecture for radio operators that won a \$30M+ contract award; led multiple teams through the test events behind it
- Architected large-scale cloud-based mission systems for DoD customers
- Proposed and led internal research bringing machine learning to the tactical edge; adopted by at least 2 further projects
- Created an innersource community with 100+ reusable projects; presented the concept to 130+ participants
- Engineering Leadership Program graduate

PROJECTS

Forge

github.com/jbutlerdev/forge

Durable AI coding-agent platform: Rust API server over long-lived agent sessions, PostgreSQL persistence, and live SSE event streaming

Mule

github.com/mule-ai/mule

AI workflow platform: agents, custom tools, and WebAssembly modules for automation pipelines (Go)

EDUCATION

Georgia Institute of Technology

2018 - 2021

MS in Computer Science

Machine Learning Specialization

University of Massachusetts Dartmouth

2010 - 2014

BS in Computer Science

SKILLS

AI Systems: Autonomous Agents, Agent Orchestration, LLM Integration, RAG, AI Coding Agents, Machine Learning

Programming Languages: Golang, Rust, Ruby, TypeScript, React, Python, C++

Platform & Infrastructure: Kubernetes, Docker, Terraform, MySQL, PostgreSQL, Redis, gRPC, REST, Microservices, CI/CD, DevOps, TDD, Agile, Virtualization
